

Nitrogen Efficiency, Carbon Energy & Soil Activation

NitroSweet is a high-performance carbon-based biological catalyst designed to **optimize nutrient utilization, improve plant energy flow, and drive yield through enhanced sugar metabolism.**

- ✓ Supplies **bioavailable carbon** → feeds microbial populations
- ✓ Enhances **nutrient conversion & stabilization through chelation**
- ✓ Improves **nutrient translocation and energy use efficiency**
- ✓ Compatible with UAN, starter fertilizers, and foliar feeds
- ✓ Can be tank-mixed with most crop protection products
- ✓ Compatible with liquid manure

By feeding soil biology and stabilizing / chelating nutrients in plant-available forms, NitroSweet transforms applied nutrients into **usable plant energy—when and where crops need it most.**

Why NitroSweet?

- ✓ Turns nutrients into **plant energy—not loss**
- ✓ Bridges the gap between **fertility and biology**
- ✓ Enhances both **yield and input efficiency**
- ✓ Flexible fit across **all crop systems**

NitroSweet™ is not just a nutrient—it's a metabolic driver that converts fertility into yield.

Why GrainRx:

A lot of fertility programs focus on what gets applied — but not always on how efficiently the crop actually uses it. That's where GrainRx fits in. What we're helping growers do right now:

- ✓ **Increase nutrient availability and uptake with live biologicals**
- ✓ **Improve nitrogen efficiency and reduce loss**
- ✓ **Build stronger root systems for better early vigor**
- ✓ **Help crops handle stress from weather and field conditions**
- ✓ **Unlock nutrients already tied up in the soil**

GrainRx is built to work *with* your current fertility program — not replace it — so you can get more performance out of the dollars you're already spending.
